## Cape Canaveral Air Force Station

Trident Wharf and Poseidon Wharf are two concrete structures on the Cape Canaveral Naval Station owned by the US Navy. They had reached the point in their life where they need rehabilitation to extend their useful service life. As part of this rehabilitation program, an active cathodic protection system was to be installed to protect the wharf concrete piles.

Tourney Consulting Group was retained to design the new cathodic protection system. It was bid out and installed by an appropriate specialty contractor. TCG reviewed the submittals prepared by the Contractor and the installation.
